ASSIGNMENT No:1

Subject: Web Technology with

UI/UX

Course Code: 2010043228

Name: Feri A Patel

Enrollment No: 2502031030021

Of Semester **4th**

College: Aditya silver oak institute of

technology

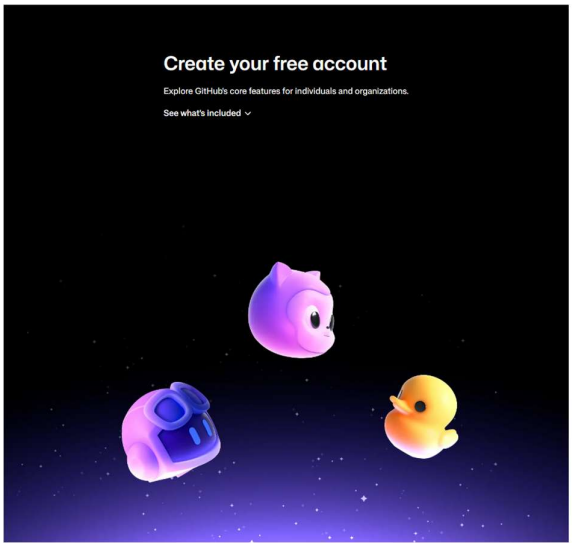
Department of Information Technology

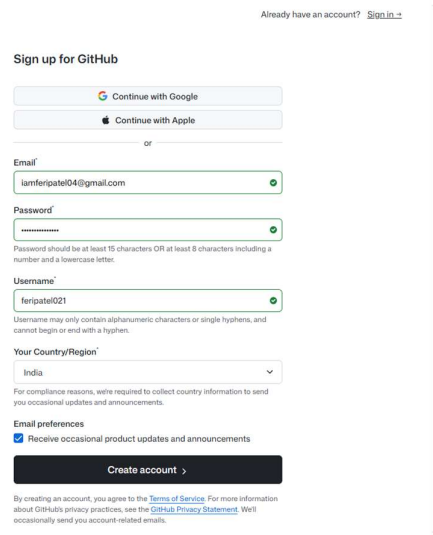
Academic Year **2025-2026**

GIT Repository Creation – Task 1

Step 1: Create GitHub Account (Sign Up)

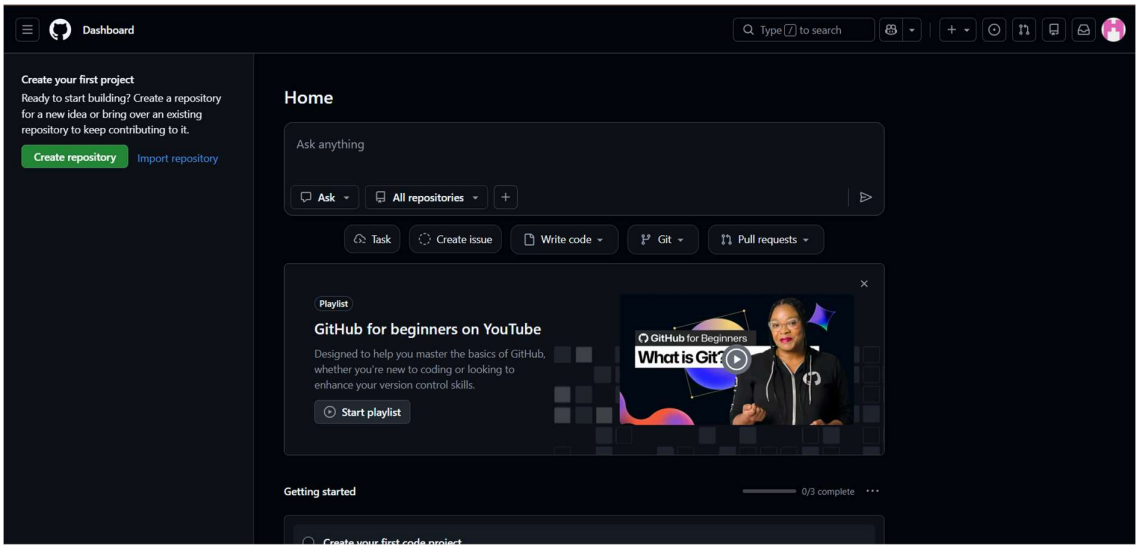
First, I opened the official GitHub website in my web browser. If I did not have an account, I clicked on the 'Sign Up' option and completed the registration process by entering my email address, username, and password. After email verification, my GitHub account was created successfully.





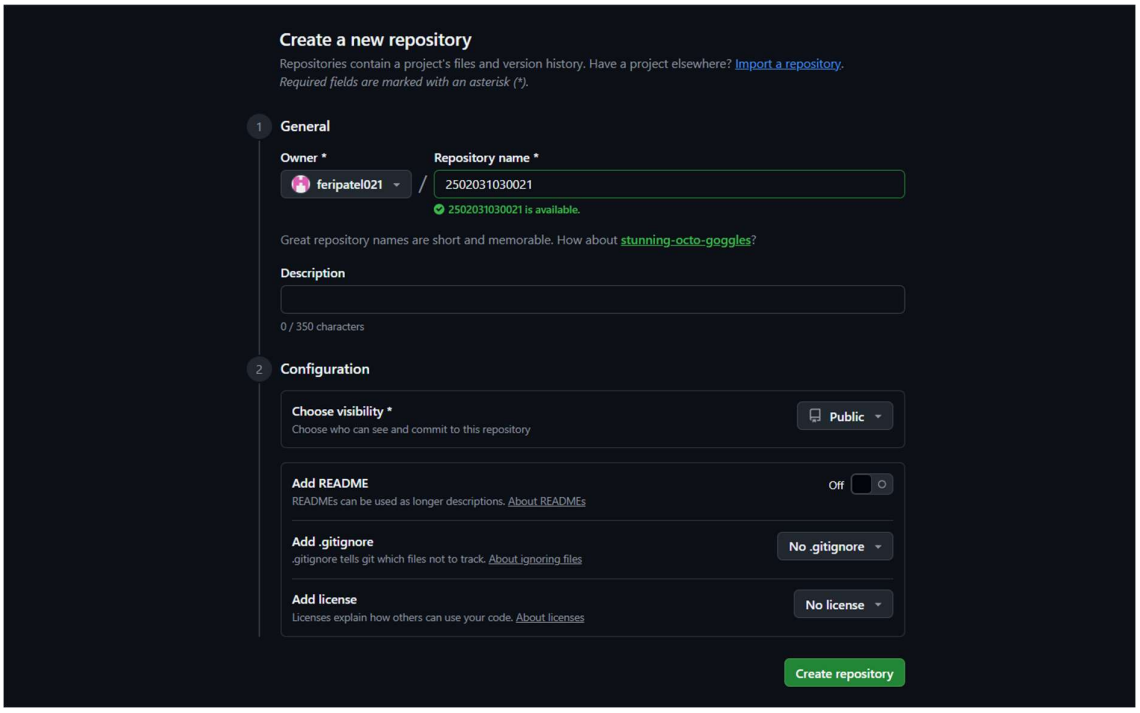
Step 2: Login into GitHub Account

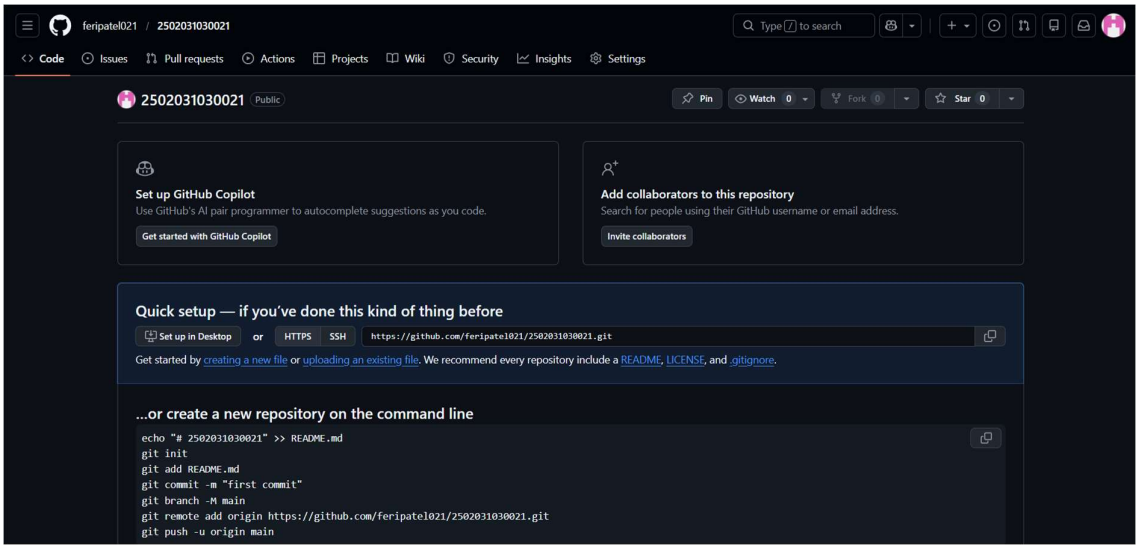
After creating the account, I logged into GitHub using my registered email ID and password. The GitHub dashboard/home page appeared successfully.



Step 3: Create New Repository

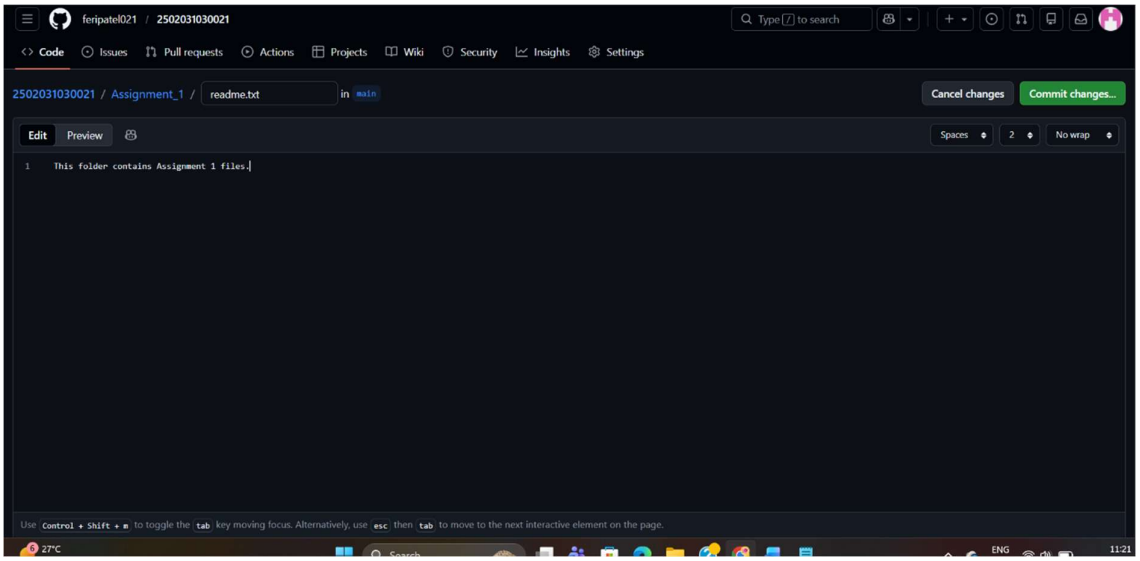
After logging in, I clicked on the 'New' button to create a new repository. In the repository name field, I entered my Enrollment Number as instructed. I selected the repository visibility as Public and initialized it with a README file. Then I clicked on the 'Create Repository' button. The repository was created successfully.

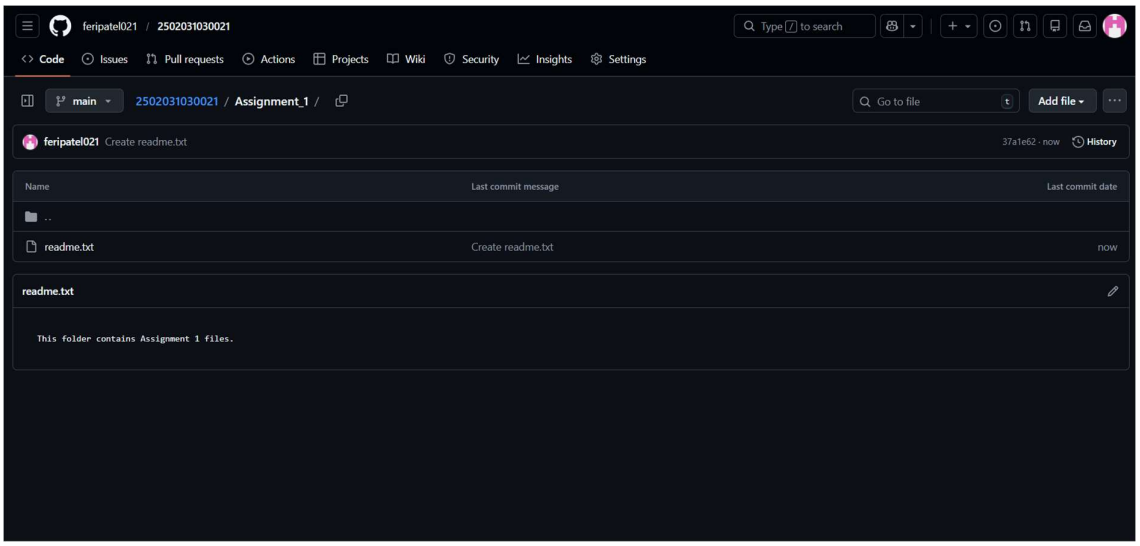




Step 4: Create Folder – Assignment1

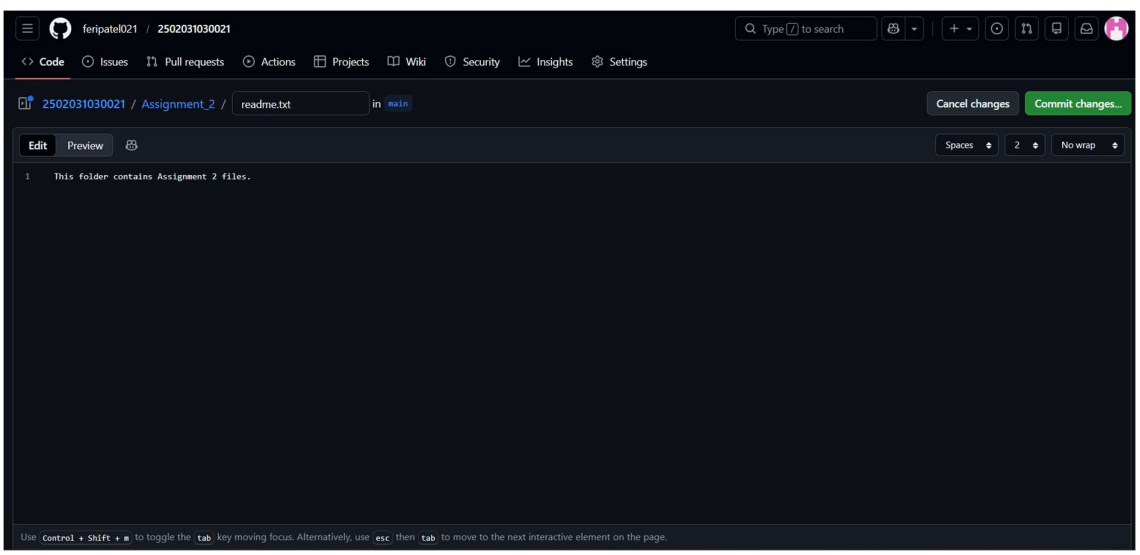
Inside the repository, I clicked on 'Add File' and selected 'Create New File'. I created a new folder named 'Assignment_1' and committed the changes.





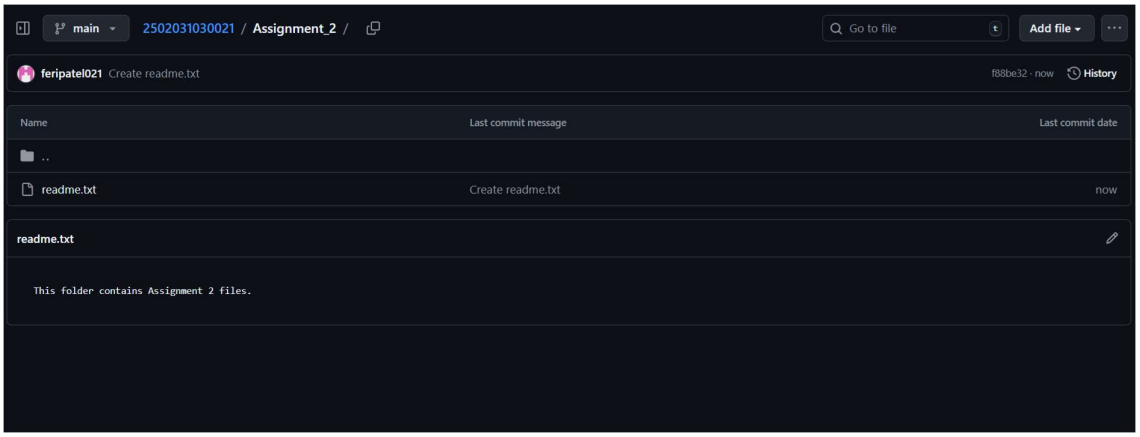
Step 5: Create Folder – Assignment_2

Similarly, I created another folder named 'Assignment_2' using the same method and committed the changes successfully.



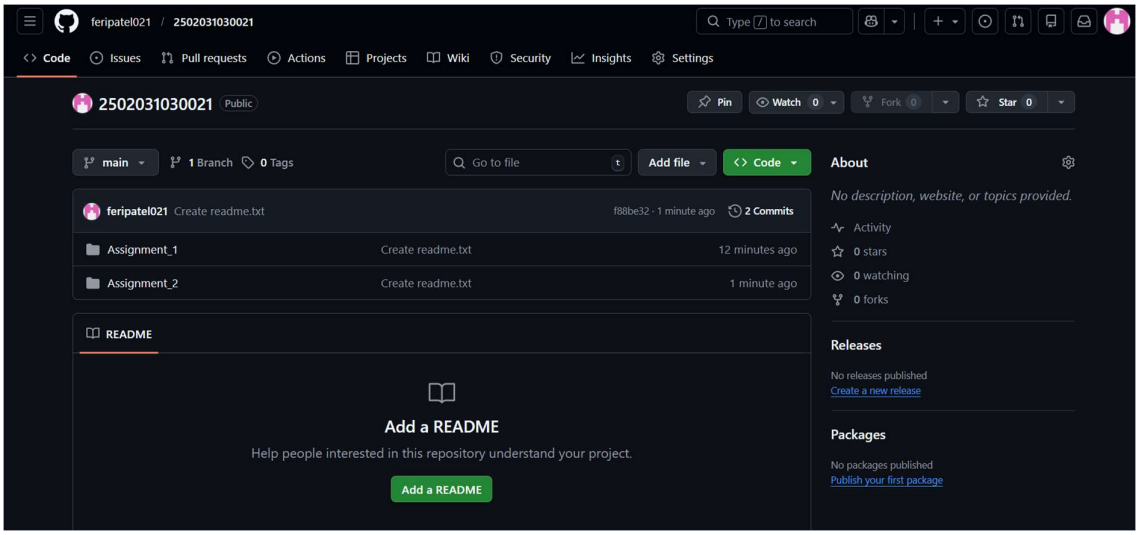
Step 6: Upload Assignments in Respective Folder

I opened each folder separately (Assignment_1 and Assignment_2). Then I clicked on 'Add File' and selected 'Upload Files' to upload the respective assignment files. After uploading, I clicked on 'Commit Changes'. The assignment files were uploaded successfully in their respective folders.



Step 7: Share Repository Link

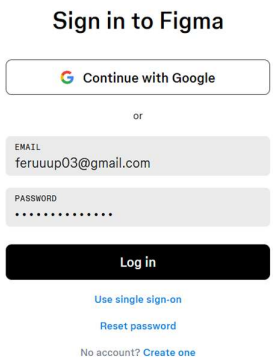
Finally, I copied the repository URL from the browser address bar. I pasted the repository link into the Google Form provided at the time of submission.



Prototype Design using Figma – Task 2

Step 1: Sign In to Figma

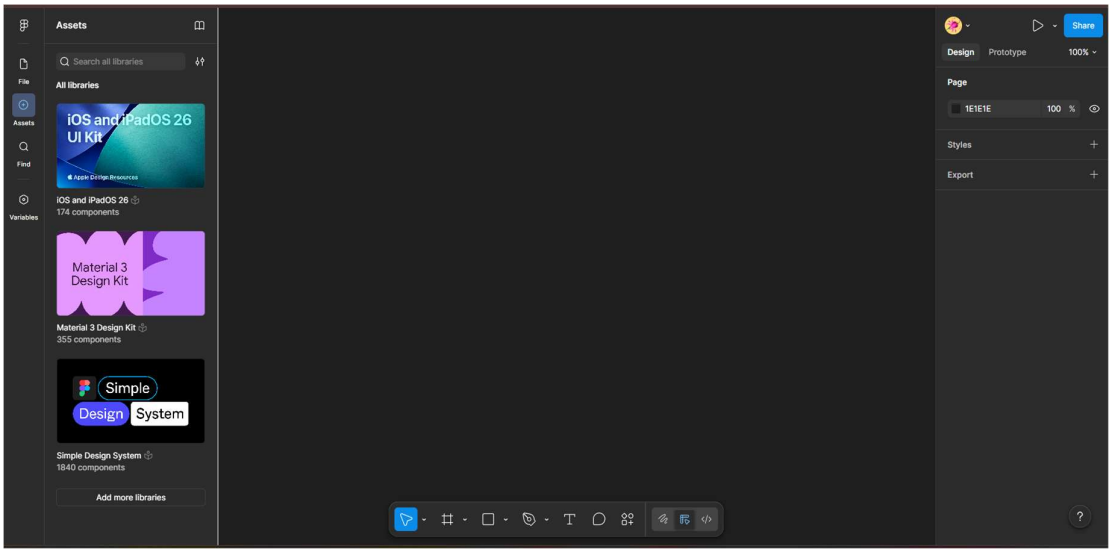
- First, I opened the official website of Figma in my web browser.
- The Sign In page appeared on the screen.
- I entered my registered Email ID and Password in the required fields.
- Then, I clicked on the **"Log in"** button to access my account.
- After successful login, the Figma dashboard opened successfully.



Step 2 : Create New Design File

From the dashboard, I clicked on **"New Design File"** to start a new project.

A blank canvas opened where I started designing the website prototype.



Step 3: Select Website Topic

I selected the topic for my prototype design as:

Online Clothing Store Website Prototype

This website is designed to allow users to browse products, view details, add items to cart, and complete the checkout process online.

Step 4: Create Website Screens (Frames)

Using the **Frame Tool (F)**, I selected Desktop size **(1440 × 1024)** to design the layout.

I created a total of **8 screens** for the website prototype.

Step 5: Design UI Elements

In all the screens, I added basic UI elements such as **navigation bar, logo, buttons, images, product cards, and text content**.

Proper colors, fonts, and spacing were used to make the design clean and user-friendly.

Step 6: Add Prototype Interaction

After designing all screens, I switched to **Prototype mode** in Figma.

I connected buttons like **Login, Add to Cart, and Checkout** to their respective pages to create navigation between screens.

Step 7: Export Screens

After completing the prototype design and adding interactions, I exported all the screens from Figma.

First, I selected each frame one by one.

From the right-side **Export section**, I selected **PNG format**.

Then I clicked on **"Export Frame"**.

- Finally, I uploaded all the exported screen images into the **Assignment_1** folder of my **GitHub repository and committed the changes successfully.
